Do your employees have unmet application needs? _____

Enterprise technology platforms are essential to the operation of businesses today, but no single platform, or even a suite of platforms, meets the needs of every department in your organization. It's extremely likely that your employees have unmet needs.

A few examples include:

Tracking workstreams and managing tasks

Routing material and collaborating with internal and external team members

Receiving and processing requests from customers

Managing projects and the flow of information across teams

Reporting progress to management and the executive team

How can Microsoft Power Apps help?

Microsoft Power Apps enables you to fill these unmet needs without the challenges of traditional software development and implementation. Power Apps provides a suite of intuitive, low-code tools to build forms, apply workflows, and integrate with external data sources without relying on either custom software or customizing an existing platform.

Simply put, you can build the apps you need without relying on cumbersome IT processes or spending a lot of money while relying on the same data protection and security services shared across all Microsoft software. It's the best of both worlds: Get the functionality you need without the hassle and expense.

How do I know if I need a Power App?

Microsoft Power Apps are almost infinitely customizable and can support an extremely wide range of functionality based on your unique needs, but there are a few key use cases to consider as you plan for your first apps.

- Are you processing anything in your organization the old-fashioned way, on paper?
- Are you relying on email to receive and process requests internally and from customers?
- Are you onboarding employees and performing appraisals manually?
- Are you approving expenses manually or using a spreadsheet?
- Are you struggling to manage access to conference rooms or other shared spaces?
- Are you receiving orders via email?
- Are you relying on email groups to broadcast key information like crisis communications?
- Are you using ERP or CRM software that misses a few steps in the process?

Do you have any examples of successful Power Apps?

Yes! Microsoft Power Apps have been helping organizations fill unmet functionality needs for almost five years. They are widely used across small, medium, and large businesses.

A few frequently used sample apps include:

Streamlining Project Management

Employee Onboarding

Easy to use Ticketing Systems

Simplified Customer Relationship Management

Crisis Communications

Room Reservations

Expense Submission and Approval

Employee Appraisals and Reviews

Client Intake Forms

What next?

Korcomptenz is uniquely positioned to help you take advantage of Microsoft Power Apps. We specialize in identifying the unmet needs in your organization and recommending the optimal solution. The process is simple and fun, and many organizations can deploy their initial apps in just a month or two.

We're so confident Power Apps can help Power Up your organization that we will help you identify potential opportunities and even create a simple proof of concept with no cost and no obligation. Request a further consultation to learn more.
