

# ERP Advisory and Consulting Services

Considering an investment in an ERP system?  
Engage us and do it right the first time.

## Introduction

Today ERP platforms are rich and more robust in capabilities with increasing embedded artificial intelligence, machine learning, IoT integrations, process automation, real-time data and insights, highly connected, speeding with intelligent technology, all catapulting the trilogy of Digital transformation.

Whether you are in the market for a new ERP to establishing your foundation or looking for a overhaul and need a jump-start; Or you are in between the cross roads of many applications, processes, integrations, functions to choose from, and deciding how to prioritize; Or you may want help on deciding how to get there (how to implement) - big bang or a phased out structured deployment; Or you may be constructing a roadmap satisfying internal stakeholders in business alongside IT, that may need some attention. At Korcomptenz we take the onus to understand what effort enterprises take to deliver their business strategy by providing a comprehensive solution for your business and its eco-system.

## Key Advisory Service Deliverables

Deciding on the ERP is a very critical decision that is foundational to the way forward, something that stays with an organization for the next five to ten years....talk to us and learn how we have engaged with our customers with a series of practices that includes interviews, studies on current systems, assessments of business acumen, workshops, doing the benefit cause analysis, culture check, demos, and following a collaborative designed approach keeping all stakeholders in mind for a successful choice of a high performing ERP platform recommendation. Our deliverables include:-

- In-depth meetings with your executive team and key stakeholders
- Develop high-level requirements for your various business processes
- Prepare essential user stories for your critical business processes
- Next generation solution architecture with an agile and design thinking methodology
- Creation of a formal Request for Proposal and corresponding documentation for ERP selection
- Coordinate and schedule ERP demos
- Support in assessing the optimal system
- Support in negotiations to select the right ERP implementation partner

### Take Advantage of a Proven Team

- ◇ Domain experts
- ◇ Finance consultants
- ◇ Data analytics gurus
- ◇ Technical experts

## Rescue Projects

If your project is delayed or you're not satisfied with the progress or solution, our team will extend support in analyzing the current project status through an audit and provide you with a recovery plan. If the project needs support in completing the critical tasks, our team will take over the tasks and deliver along with your current partner or we will take full control of the project and work with your team to make a turnaround.

### Why Korcomptenz?

Korcomptenz has helped many mid-sized to large size enterprises as a system integrator, implementor, with technical, functional and industry specific expertise. Our ERP advisory and consulting services team will evaluate your current systems, infrastructure, applications, processes, workflows, existing technology, challenges, risks and will propose the right ERP and enhanced solutions with the best of the breed and the most cost-effective approach.

## Value Proposition

The Korcomptenz ERP Advisory Consultancy team comprise of experts that have implementation experience with enterprise grade ERP softwares. The team helps you decide on not only your future ERP but helps you design state of the art cutting edge technologies on the whole IT landscape, that prepares you to become an enabler for the operating model and business outcomes that you desire for your organization.

For example no ERP can satisfy all the requirements an enterprise has. Some may be great on Financial management and Operations but you may need Demand Planning more, as that may be your priority feature. Other times you may need a software that has a omni-channel capability that needs to talk to your ERP. There are other instances where you may need a hybrid model on cloud and may not want to adopt SaaSification everytime.

Our approach is to provide on your full spectrum of requirements, from strategy and planning, through use case development covering all the stakeholders, to select the right ERP application and implementation partner.

### Industries

We have helped clients across sectors transform. A few example sectors are:

- Manufacturing
- Fast-Moving Consumer Goods (FMCG)
- Retail
