Our Analytics Services

Enterprise Reporting Assessment & Recommendations

We assess, evaluate your current reporting standards, critical management, and statutory reporting requirement as per the business demand, challenges in accessing the disparate data systems and offer recommendations for improvement.

Value Innovation & Business KPI Design

It identifies the existing value drivers, inefficiencies in monitoring, impact on the overall goal achievement and recommends target KPIs for future. Post KPI design we recommend how to realise them through Advanced Analytics.

Data Warehousing Integration

We help in Financial Planning and Analysis (FPA) by turning raw accounting data into powerful visuals and analytic reports to unearth hidden insights. We help organizations in forming and tuning their operational performance in areas such as supply chain, manufacturing, Inventory Management, Product life cycle management, Asset reliability improvement.

Advanced Analytics Implementation & Support

Our advance analytics experts (including AI & ML certified resources) can conceive, execute, and support advance analytics projects on various technical platforms using cloud technologies and leading-edge visualization tools.

Data Engineering & Transformation

We have experience in the end-to-end analytics value chain from Data Ingestion to data storage, data processing, modeling and visualisation. It has successfully completed multiple initiatives on data migration from legacy systems and engineering them for further analysis, visualization, and reporting.

Advanced Analytics Architecture

Korcomptenz has highly skilled and experienced team in designing a scalable and sustainable architecture for end-to-end Data Warehouse Design to Data Management, to Analytics and Visualisation.

Insightful Visualization

We decode the data and transform them into compelling and insightful visuals which is very easy to use, customised for specific roles and can assist you for better operational and strategic decisions.

Our Platform Expertise

Microsoft

Azure Synapse Analytics

Azure Synapse helps you to ingest, explore, prepare, transform, manage, and serve data for BI, and machine learning needs. It gives you the freedom to query data on your terms, using either server less or dedicated options—at scale.

Azure Data Lake

Our certified and experienced consultants let organizations derive cloud scale benefits of this limitless analytics service that brings together data integration, enterprise data warehousing (EDW) and big data analytics.

Azure IoT

Enable highly secure and reliable communication between your Internet of Things (IoT) application and the devices it manages. It provides a cloud-hosted solution back end to connect virtually any device.

Power BI

Our certified and experienced consultants have delivered several Visualization and reporting initiatives for organizations across multiple industries. Power BI lets you connect to and visualize any data using a unified, scalable platform for self-service and enterprise business intelligence (EBI) that is easy to use and helps you gain deeper data insight.

Salesforce

Salesforce Tableau

Connect with customers on a deeper level, by gaining valuable insights as you manage and monitor your business in real time. Tableau enhances Customer 360 with analytics apps, dashboard templates, and seamless product connections.

Salesforce Einstein AI

We can help you to plan your cloud migration, data analytics, AI strategy and analytics insights with Salesforce Einstein that can help accelerate your business. We also help you engage customers and prospects, optimize operations, empower your employees, and increase productivity

Snowflake

We empower organizations by fully leveraging the capabilities of the Snowflake data platform such as data warehousing, data lakes, data engineering, data science, data application development and for securely sharing and consuming data across entity boundaries

How Analytics can help your business

1 Strategic & Tactical Decision Support

Assist in data driven, real time strategic and tactical decision making. It helps you to visualize your business drivers better in terms of the market, customer, operational efficiency, and financial health better.

2 Improved Business Agility

Supports for day-to-day business decisions, identifies the process lacunas and areas for improvement, reduces manual intervention and repetitive work and hence increase agility of the process.

3 Better Predictability

Predictive analytics uses advanced AI/ML techniques to generate highly accurate predictions about future business trends, market demand, customer preferences, operational KPIs, asset performance, productivity, inventory, and quality etc.

4 Unified Experience

Maximize the impact of your existing data science and business intelligence tools and reduce development time with a unified workspace for end-to-end analytics solutions.

5 Analytics without sacrificing security

Keep your data protected with industry-leading, multi-layer security and privacy features like automated threat detection and always-on encryption.

6 Unified Data Model

Seamlessly unify your data across sources and systems to maximize accessibility while optimizing the performance of queries with intelligent workload management and limitless concurrency

Interested to know more? Avail our Complimentary Assessment

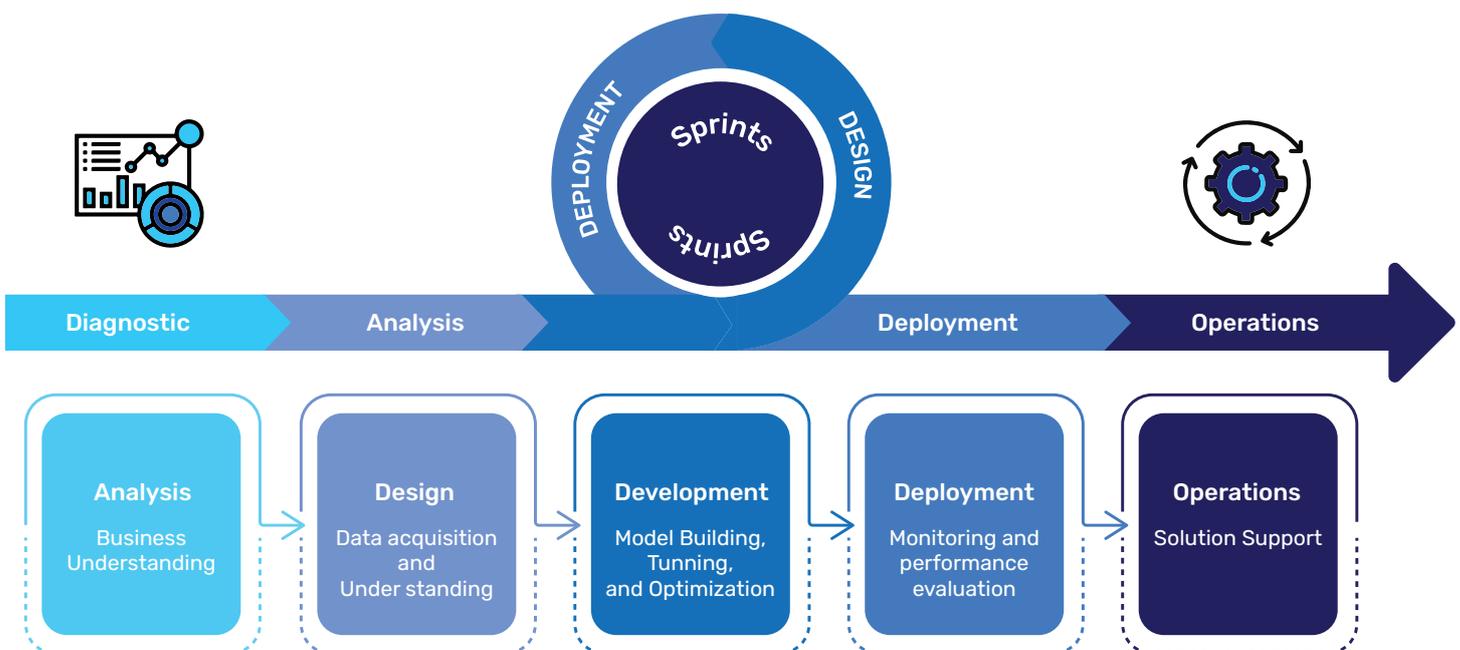

A detailed plan on 1-Day Assessment:

- ◆ We meet up with your executives and operations team to discuss your short term and long-term reporting and analytics roadmap
- ◆ We review your current reporting landscape along with the data sources and arrive at the gap between where we are and where we want to be
- ◆ Based on our study of your requirements and gaps, we will deliver a detailed report of recommended solution along with alternative technology options and high-level project schedule and cost

In addition to the above, we will also be able to support and enhance your current data warehouses and analytics infrastructure, on a short term or long-term basis.
